Date:	12.23.2015	Addendum No:	Area "C" – Addm #1
Project:	York General Health Care Services Hospital Addition And Remodel	Project No:	24902
To:	Jake Kulhanek	Firm:	Sampson

NOTICE
THIS ADDENDUM IS ISSUED BY THE ARCHITECT TO ALL PARTIES WHO HAVE RECEIVED BIDDING DOCUMENTS FOR THE ABOVE LISTED PROJECT. THIS ADDENDUM SHALL BECOME PART OF THE CONTRACT DOCUMENTS AS A REVISION TO THE ORIGINAL DOCUMENTS.

CONSTRUCTION DOCUMENTS:

STRUCTURAL:

1. Sheet S1-0, STRUCTURAL NOTES / DETAILS. (Reissue in its entirety):
    a. Revised the jamb stud required for openings above 7'-0" in Detail 6.
2. Sheet S1-1, FOUNDATION & FLR FRAMING / DETAILS AREA A. (Reissue in its entirety):
    a. Added size and reinforcing for footing pad "F13" to the footing schedule. No new pads were added and no modifications to current footings were made. The pad in question already appears on the plans.
3. Sheet S1-6, LOW ROOF & FLR FRAMING / DETAILS AREA A. (Reissue in its entirety):
    a. Modified the tag for steel beam X21;XHH-XLL and X16;XHH-XKK to existing. The sizes shown on the plan are correct.
4. Sheet S5-3, STRUCTURAL DETAILS. (Reissue in its entirety):
    a. Added notes to Detail 20 & 21 for optional equivalent steel framing sections to the unistrut shown. Framing member's selection is contractor's option.
    b. Added detail 24, a loading diagram for the "14KSP1" joists called out on S1-7. No new joists were added and no modifications to current framing were made. The joist in question already appears on the plans.

ARCHITECTURAL:

5. Sheet A1-3, FLOOR PLAN – AREA C (Reissue in its entirety):
    a. Revised OR layouts

6. Sheet A6-3, REFLECTED CEILING PLAN – AREA C (Reissue in its entirety):

STRUCTURAL NOTES, GENERAL

1. CODE: 2009 International Building Code w/ City of York, Nebraska Ammendments

2. STRUCTURAL DESIGN LOADS:

   SNOW:
   Ground Snow Load: 25 PSF I=1.2
   Note: Buildings have been designed in accordance with ASCE 7-05 as required by Section 1608.1 of the 2009 International Building Code.

   FLOOR LIVE LOADS: 100 PSF

   WIND:
   Basic Wind Speed: 90 MPH (Exposure C) I=1.15
   Note: Buildings have been designed in accordance with ASCE 7-05 as required by Section 1609.1.1 of the 2006 International Building Code.

   SEISMIC:
   Spectral Response Accelerations: S_S= 0.158 ; S_1= 0.043
   Site Class: D
   Occupancy Category: IV
   Seismic Design Category: C
   Note: Buildings have been designed in accordance with ASCE 7-05 as required by Section 1613.1 of the 2009 International Building Code.

   ROOF LIVE LOADS: 25 PSF

3. FOUNDATION DESIGN CRITERIA:

   Soils investigation report dated November 7, 2013 by Thompson, Dreesen, Dorner Inc.. (TD2 File No. 1272-257)

   Allowable Net Soil Bearing per Soil Report: 2000 PSF

4. EXCAVATION, FILL, AND BACKFILL:

   A. See specification 31 21 00 for requirements.

   B. All earthwork should be observed and tested by Geotechnical Engineer

5. GENERAL NOTES:

   A. All work shall comply with requirements of the 2009 International Building Code, with recommendations of manufacturers, and with recognized workmanship and material standards.

   B. Comply with all applicable codes, ordinances, and regulations including those promulgated and enforced by OSHA. The structural design represented by the drawings and specifications is based on interaction of the various components, materials, and systems shown or required by all of the drawings and specifications. The contractor shall determine the need for and provide all required bracing or other means to insure stability and safety until all work required by the contract documents is complete. When and where necessary to comply with these requirements, the contractor shall provide appropriate additional temporary or permanent connections and/or members or, in the alternative, shall make appropriate modifications of specified connections and/or members. Where additions to or modifications of specified requirements are proposed, they shall be submitted to the Architect for review and approval. Such review and approval will be only for compliance with the structural and architectural design intent for the work. The adequacy for construction phase stability and safety is the responsibility of the contractor.

   C. Adapt requirements of details, sections, plans, and notes at all locations of which conditions are similar.

   D. The structural drawings are to be read in view of all other drawings and all specifications. Coordinate all work shown with all other work.

   E. Shop drawings for any part of the work shall show the interface with and provisions for related other work including such adaptations of requirements given as may be necessary.

   F. Contractor shall cross check dimensions and elevations between architectural, mechanical, and structural plans and notify Architect of any variance before contractor begins work.

6. SPECIAL INSPECTION:

   Special Inspection in accordance with Section 1704 of the 2009 International Building Code will be performed for the following types of work:

   A. Soils: Special Inspection in accordance with Section 1704.7 of the IBC is required for site preparation, fill placement, evaluation of in-place density of fill material, and footings.

   B. Concrete & Reinforcing Steel : Special Inspection in accordance with Table 1704.4 of the IBC is required for all reinforced concrete, excluding slabs-on-grade that do not have reinforcing bars and site work concrete fully supported on earth. Cast-In anchor bolts shall be inspected.

   C. Structural Steel : Special Inspection in accordance with Section 1704 and Table 1704.3 of the IBC is required for all structural steel.

   D. Masonry: Level 1 Special Inspection in accordance with Table 1704.5.1 of the IBC is required for all masonry. Prism tests are not required.

   E. Post-Installed Anchors: Provide special inspection in accordance with the product's ICC/ES Report. All stress increases have been utilized.

   The Contractor shall provide the Special Inspector sufficient notification to allow the required inspections to be made without delaying the construction schedule. The Contractor shall confirm that ALL inspections have been completed and approved by the Special Inspector prior to proceeding with Work.

CAST-IN-PLACE CONCRETE WORK

1. MATERIALS:

Concrete:

Class	Locations	28-Day Strength	Max. Slump	Max. Aggregate	Air Entrainment
TYPE I	Interior slab-on-grade	3000 PSI	5"	3/4"	N.A.
TYPE II	Exterior slabs	4000 PSI	5"	1"	5%-7%
TYPE III	Footings and Walls.	3000 PSI	5"	3/4"	5%-7%
TYPE IV	Interior flat slab & slab-on-deck	4000 PSI	5"	3/4"	N.A.

Other Materials:

Reinforcing Bars: ASTM A615 Grade 60, deformed.
Deformed Bar Anchors: ASTM A496, with a minimum tensile strength of 80 ksi.
Welded Wire Fabric: ASTM A185, flat sheet type.
Anchor Bolts: ASTM F1554 Gr. 36, Unless Noted Otherwise.
Adhesive Anchors: Hilti "HIT RE 500-SD" or Simpson "SET-XP", when anchoring to concrete.
Expansion Anchors: Hilti "Kwik Bolt TZ" or Simpson "Strong-Bolt"

2. CONTINUITY:

All wall and foundation reinforcing shall be continuous unless noted otherwise. Continuity at corners and intersections shall be achieved using corner bars and contact lap splices, see detail 2/SS.1 Continuity at other locations may be achieved using contact lap splices shown on approved shop drawings. Location of lap splices shall be shown on the shop drawings. Unless noted otherwise, the following lap splices shall be used:

Location:	#3	#4	#5	#6	#7	#8	#9	#10	#11
Top Bars (*):	21"	28"	35"	46"	63"	82"	104"	132"	162"
Other Bars:	16"	22"	27"	35"	48"	63"	80"	102"	125"

(*) Top bars are horizontal reinforcing where more than 12" of concrete is cast in the member below the reinforcing.

Mechanical connections may be used in lieu of lap splices provided approval is obtained from the Architect/Engineer. Connections shall develop in tension 125 percent of the specified yield strength of the bar. All mechanical connections shall be shown on the shop drawings.

3. GENERAL:

   A. All concrete work shall comply with 2009 International Building Code and ACI 301.

   B. Coordinate work with all other work.

   C. All reinforcing shall be continuous, see notes above. All reinforcing, anchor bolts, and embedded items shall be secured in place prior to placing concrete.

   D. Construction joints shall be keyed joints, unless noted otherwise, with reinforcing continuous through the joint. Concrete on one side of construction joints shall not be placed less than 48 hours after placement of concrete on the opposite side of the construction joint.

   E. Clear cover from reinforcing to surfaces of concrete shall be as shown. Clear distance between parallel bars in a layer shall be as shown on the plans with minimum of 1" or the diameter of the reinforcing, whichever is greater. Clear distance between parallel bars in two or more layers shall be as shown on the plans with a minimum of 1" or the diameter of the reinforcing bar, which ever is greater.

4. FOOTING WORK:

   A. See plans for Footing Schedule. Coordinate footing work with all other work.

   B. Pipes and other work which require trenching adjacent to pad footings and parallel to continuous footings shall not be located below lines extending downward from the bottom edges of the footing at a 45-degree angle from the horizontal. Pipes and other work perpendicular to continuous footings may be located beneath the footing. Footing elevations may be lowered if approved on the footing shop drawings.

   C. All openings in concrete work shall be formed or sleeved, see 11/SS-1. Drilled openings are not permitted.

5. INTERIOR SLAB-ON-GRADE WORK:

   A. Coordinate slab-on-grade work with all other work. Provide slopes, thickened slabs, depressed slabs, equipment pads, blockouts, etc. as needed.

   B. Sawcut control joints in slab to a depth equal to 1/3 the slab thickness.

   C. Slab-on-grade Requirements:

      (1). Thickness: 4" minimum.
      (2). Reinforcing: 6x6 - W1.4xW1.4 welded wire fabric (w.w.f.)
      (3). Control Joints: Sawcut at 10'-0"o.c. maximum each way along column lines and at equal spaces between column lines. Coordinate with Architect.

   D. All slabs-on-grade shall have a minimum STEGO 15 mil. vapor barrier beneath the slab. .

   E. Provide 4" of free draining, well graded, and compacted material over 12" of low plasticity "structural fill" beneath the vapor barrier.

   F. Separate slab-on-grade from all columns, walls, or other vertical surfaces w/ 3/8" expansion joint material.

6. STRUCTURAL STOOPS:

   A. Slabs at structural stoops shall be 4" minimum / 8" maximum concrete slab on 4" biodegradable void forms. See 1/SS-1 for typical stoop construction and reinforcing.

   B. Stoop slabs shall bear on and/or be supported on all sides by concrete walls or footings as shown on the drawings. Coordinate stoop size with Architectural Drawings.

7. CONCRETE WALLS:

   A. Designations for walls, reinforcing, and other notes are noted on the plans and detailed in the sections. All walls shall be reinforced.

   B. All walls shall have dowels with a 90° ACI standard hook, unless noted otherwise, embedded in the footing. The dowels shall be the same size and spacing, and lap spliced with the vertical wall reinforcing in the wall. The dowel shall extend to within 3" of the bottom of the footing.

   C. Walls may have openings at various locations. Coordinate all openings with other requirements. Openings not shown shall be brought to the attention of the Architect/Engineer for determination of reinforcing requirements. Wall reinforcing shop drawings shall show all openings and reinforcing provisions for each opening.

   D. All reinforcing shall be continuous through construction joints. All construction joints shall be shown on the shop drawings and approval obtained.

STRUCTURAL STEEL WORK

1. MATERIALS:

Structural Members (W shapes): ASTM A992, Grade 50, U.N.O.
Angles, Channels, Plates, and Bars: ASTM A36, U.N.O.
Hollow Structural Section: ASTM A500 Grade B
Steel Pipe: ASTM A53, Type E or S, Grade B
Headed Studs: ASTM A108, Grade 1015
Anchor Bolts: ASTM F1554, Gr. 36, headed type; U.N.O.
Non-High Strength Bolts: ASTM A307
High Strength Bolts: ASTM A325 bolts, U.N.O.
Adhesive Anchors: Hilti "HIT-RE 500-SD", Simpson "SET-XP", when anchoring to concrete. Hilti "HY150 MAX", Simpson "Acrylic-Tie", when anchoring to solid masonry.
Welding Electrodes: E70
Deformed Bar Anchors: ASTM A496, with a minimum tensile strength of 80 ksi.

2. STRUCTURAL STEEL:

   A. Provide structural steel work as shown on the drawings and described in the specifications and submit shop drawings for the same. Where the design of members or connections are not specifically noted, provide such in accordance with the latest AISC specifications and submit the design with the shop drawings for approval.

   B. Steel shall be fabricated to achieve the elevations, slopes, and geometry shown on the Architectural and Structural Drawings. Structural steel shall provide a uniform surface for the attachment of metal deck.

   C. Comply with all applicable codes, ordinances, and regulations including those promulgated and enforced by OSHA. See STRUCTURAL GENERAL NOTE 5.B.

   D. All structural steel shapes, plates, bolts, ect. exposed to weather or in contact with treated lumber shall be either hot dip galvanized, painted with Tnemec 90-97 zinc rich primer.

3. METAL DECK:

   A. METAL ROOF DECK:

      (1) Vulcraft 1.5B, 3N, 3NIA or Approved Equal with the following minimum section properties:

      Depth: See Plans
      Thickness: See Plans
      Finish: See Plans
      Yield Stress: 33 ksi

      (2) Metal roof deck shown on the drawings shall be used in 3 or more span condition U.N.O.

      (3) Metal roof deck shall be attached as follows, unless noted otherwise on the drawings:

      a. Where deck is perpendicular to steel supports fasten deck to supports with 5/8" diameter puddle welds at 36/4 pattern [1.5" deck] and 24/4 pattern [3" deck] .

      b. Where deck is parallel to steel supports fasten deck with 5/8" diameter puddle welds @ 12".

      c. Fasten side laps of individual sheets together with (4) #10 TEK screws/span, minimum 12"o.c.

      (4) All edges and openings in deck shall be supported. Unless noted or approved otherwise, provide support in accordance with the following:

      a. Openings less than 8":
      Add a 2'-0" (min.) wide x 3'-0" long piece of deck nested on top of deck. Screw flutes together with #10 screws @ 6" centers. Opening may be cut through the center of the deck.

      b. Openings greater than 8" in either direction:
      Support edges of opening with steel framing supported by the steel joists or beams as shown on 3/SS-2. The steel deck shall be welded to the framing with welds at 12" centers.

      (5) Up to 50 pounds may be supported from metal deck provided the individual attachments are located not less than 4'-0" o.c. and the attachment to the deck distributes the load to at least 3 deck flutes.

   B. METAL FLOOR DECK:

      (1) Vulcraft 1.5C, 0.6C or Approved Equal with the following minimum section properties:

      Depth: See Plans
      Thickness: See Plans
      Finish: See Plans
      Yield Stress: 33 ksi

      (2) Metal floor deck shown on the drawings shall be used in 3 or more span condition U.N.O.

      (3) Metal floor deck shall be attached as follows, unless noted otherwise on the drawings:

      a. Where deck is perpendicular to steel supports fasten deck to supports with 5/8" diameter puddle welds at 36/6 pattern [1.5" deck], and #12 TEK screws at 30/4 pattern [0.6" deck]..

      b. Where deck is parallel to steel supports fasten deck with 5/8" diameter puddle welds @ 12" [1.5" deck], and #12 TEK screws at 12" o.c. [0.6" deck].

      c. Fasten side laps of individual sheets together with (2) #10 TEK screws/span [1.5" deck], and (1) #10 TEK screw/span [0.6" deck].

4. STEEL JOISTS:

   A. Steel Joists are designated on the drawings using Steel Joist Institute designations. Provide special joist designs as noted on the drawings.

   B. Design all joists for a net uplift of 10 pounds per square foot. Provide bridging as required for uplift.

   C. Steel joists shall be designed for the following Deflection limitations:

Location	Total Load	Live Load
Roof	L/240	L/360

   D. All bridging shall be continuous. Bridging may be terminated where necessary (e.g. for mechanical work) provided diagonal cross bridging is provided at each adjacent joist space. Bridging shall not be interrupted at two adjacent joist spaces.

   E. Where diagonal cross bridging is used, provide horizontal bridging at first joist space adjacent to walls.

   F. Do not place concentrated loads in excess of 50 lbs. between panel points of steel joists unless web members are installed in accordance with 4/SS-2.

   G. Joist locations shall be shown on the shop drawings. Any deviations in locations for those shown on the drawings shall be highlighted.

   H. K series joists shall have a 2 1/2" bearing unless noted otherwise.

   J. Add steel joists to the existing roofs where shown on plans. Joists shall be two piece with a bolted splice connection. ASTM F1852 or ASTM F2280 bolts shall be used at slip-critical joints. New steel joist seats to match existing adjacent joists, contractor verify. Reconnect all bridging to the joists. Top chord bracing requirements by joist manufacturer. 5

5. MECHANICAL, ELECTRICAL, AND PIPING SYSTEMS WORK:

   A. Do not support concentrated loads from steel roof deck except as allowed per note 3.A.(5) above.

   B. Secondary framing, bridging, or other means shall be provided to distribute loads to structural members. Such framing, bridging, or other means shall be shown on the shop drawings for the work of the mechanical, electrical and piping systems.

6. VENEER:

   A. All veneer shall be supported at the head of openings.

   B. All openings in brick veneer shall have a lintel at the head of the opening. Unless noted otherwise, use a galvanized steel angle as follows:

   - Openings up to 4'-0": L4"x4"x5/16" angle..... Ref.: 7A/S1-0
   - Openings wider than 4'-0 and up to 7'-0": L6"x4"x3/8" angle [L.L.V.]..... Ref.: 7B/S1-0
   - Openings wider than 7'-0" and up to 10'-0": Ref.: 7C/S1-0

   Any opening that can not be made in accordance with the requirements above and are not detailed on the Structural Drawings, shall be brought to the attention of the Architect/Engineer for determination of lintel size.

STRUCTURAL COLD-FORMED METAL FRAMING WORK

1. GENERAL:

   A. All cold-formed metal framing work shall comply with the 2009 International Building Code and AISI - American Iron and Steel Institute - "Cold-Formed Steel Design Manual".

   B. Structural cold-formed metal framing is all exterior walls, canopies, and soffits. See Specifications Section 05 40 00 for the balance of information.

   C. Structural cold formed metal framing shall be constructed to achieve the geometry shown on the Architectural or Structural drawings.

   D. All structural lightgage framing members shall be 18 gage and spaced at 16"o.c. maximum, unless noted or detailed otherwise. Stud and Track properties are as follows:

   E. Connection material noted on the plans shall be by 'The Steel Network, Inc.' of Raleigh, North Carolina [www.steelnetwork.com / 1-888-474-4876] or Approved equal.

2. INSTALLATION:

   A. Metal stud walls may be prefabricated. Prefabricated frames shall be square, with components attached in a manner to prevent racking during fabrication, transportation, and lifting. Provisions to lift the panel shall be included in the frame's design and construction.

   B. Field cutting of steel framing members shall be by saw or shear. Torch cutting will not be permitted.

   C. At any locations where OSB or Gypsum sheathing is not attached to both sides of wall, provide lateral bracing per 5/S1-1-0.

   D. At track butt joints, abutting pieces of track shall be securely anchored to a common stud. Where splicing of wall track is necessary between stud spacings, a piece of stud shall be placed in the adjoining track sections and fastened to the track flanges at both sides of the wall with (3)-#12-14 TEK screws on each side of the joint.

   E. Studs shall be installed seated squarely (within 1/16") against the web of the top and bottom track. Studs shall be plumbed, aligned and secured to the continuous runner tracks with (2)-#12-14 TEK screws (Both sides).

   F. Openings:
   (1) Unless detailed otherwise, construct openings 4'-0" and less as follows:
   - Provide (2)-studs at jambs. Use a 16ga. track at head and sill attached to jamb studs at each end w/ 2"x2"x5 3/4"-14ga .clip angle. Attach clip angle to both track and jamb stud w/ (3)-#12-14 TEK screws each.

   (2) Openings greater than 4'-0" but less than of equal to 10'-0" shall be constructed with a lightgage beam at the head and sill of the opening per 6/S1-0. (U.N.O.) 1

   G. Connect multiple studs and track together with #12-14 TEK screws @ 12" unless noted otherwise on the drawings.

   H. Attach track to concrete/grouted CMU w/ (1)-Hilti 0.157 X-U Universal kurnled shank fasteners at 8"o.c. [1" embedment], unless noted or detailed otherwise.

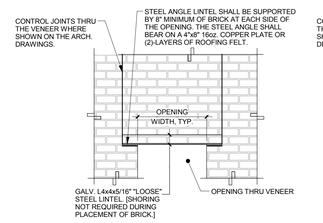
   I. Attach track to steel framing w/ #12 TEK screws at 8"o.c., unless noted or detailed otherwise.

EXISTING WORK

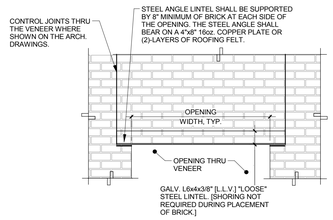
1. Existing conditions shown or noted on the drawings were obtained from existing plans or or were assumed. If conditions other than those shown exist, immediately notify Architect before proceeding with the work at that location. If conditions other than those shown exist, alternate methods of construction may need to be used.

2. Use appropriate construction methods and equipment as necessary to support existing structures and to avoid overstressing the existing structures.

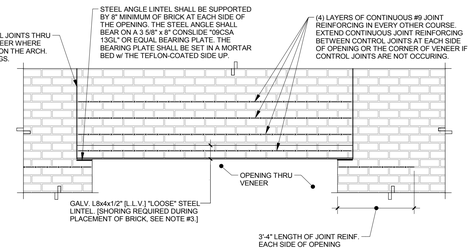
3. All openings in existing construction shall have a lintel at the head. Notify engineer of any openings in existing walls which are not shown on plans.



A OPENING WIDTH LESS THAN OR EQUAL TO 4'-0"



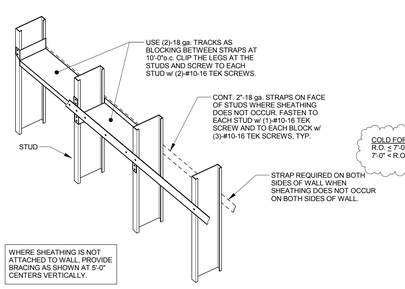
B OPENING WIDTH GREATER THAN 4'-0" AND LESS THAN OR EQUAL TO 7'-0"



NOTES FOR OPENING WIDTH GREATER THAN 7'-0" & LESS THAN OR EQUAL TO 10'-0":
1. JOINT REINFORCING SHALL BE HOT-DIP GALV. TRUSS-TYPE OR LADDER-TYPE FABRICATED FOR 4" NOMINAL VENEER.
2. IF MORE THAN (1) SECTION OF JOINT REINFORCING IS REQUIRED IN A ROW, OVERLAP 1'-6" MINIMUM.
3. SHORE THE STEEL ANGLE DURING PALCEMENT OF THE BRICK VENEER UNTIL THE FULL HEIGHT OF VENEER OVER THE OPENING HAS OBTAINED DESIGN STRENGTH. SHORING SHALL BE AT 5'-0" MAXIMUM AND BE DESIGNED TO SUPPORT THE FULL WEIGHT OF THE VENEER ABOVE THE OPENING.
4. NOTIFY ENGINEER OF ANY OPENINGS GREATER THAN 10'-0" WIDE WHERE LINTEL IS NOT SHOWN ON THE DRAWINGS.

C OPENING WIDTH GREATHER THAN 7'-0" & LESS THAN OR EQUAL TO 10'-0"

7 MASONRY VENEER OPENING DETAILS
3/8" = 1'-0"



WHERE SHEATHING IS NOT ATTACHED TO WALL, PROVIDE BRACING AS SHOWN AT 5'-0" CENTERS VERTICALLY.

5 LIGHTGAGE STUDWALL BRACING

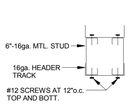
6 STRUCT. LTGA. WALL AT OPENINGS
1 1/2" = 1'-0"



SECTION A-A

MASONRY WORK

1. MATERIALS:

Reinforcing Bars: ASTM A615 Grade 60, deformed.
Weldable Reinforcing Bars: ASTM A706 Grade 60, deformed.
Concrete Masonry Units: Grade N, F'm = 1500 psi (Type S mortar)
Grout Strength: 2000 psi @ 28 days
Adhesive Anchors: Hilti "HY70" adhesive, when anchoring into brick or hollow CMU material. Hilti "HY150" or Simpson "SET" adhesive, when anchoring into grouted solid CMU.
Expansion Anchors: Hilti "Kwik Bolt 3" anchors U.N.O.

2. CONTINUITY:

All wall and foundation reinforcing shall be continuous unless noted otherwise. Continuity at corners and intersections shall be achieved using corner bars and contact lap splices, see detail 2/SS-1 . Continuity at other locations may be achieved using contact lap splices shown on approved shop drawings. Location of lap splices shall be shown on the shop drawings. Unless noted otherwise, the following lap splices shall be used:

Location:	#3	#4	#5	#6	#7
Masonry	20"	24"	30"	36"	48"

3. All masonry work shall comply w/ the 2009 International Building Code and ACI 530-05 and ACI 530.1-05

4. Requirements for masonry wall construction are given on the drawings and Wall Construction. All reinforcing shown shall be continuous in grout-filled cells. See note above for continuity requirements.

5. Provide dowels in footings and in concrete walls at each vertical rebar. For footings less than 2'-0" deep, dowels shall have a 90° ACI standard hook. The dowels shall be the same size and spacing, and lap spliced with the vertical reinforcing in the wall.

6. Locate vertical reinforcing at corners, jambs, intersections, and at spacings noted on the drawings.

7. Unless noted otherwise on the plans, all openings shall have a lintel at the head. For any openings not shown on plan and less than 4'-0" thru CMU, the lintel shall be an 8" deep minimum bond beam bearing 8" on each jamb, see 4/S1-0. A 1"□ hole shall be cut in the bottom of the lintel unit at each jamb to place the vertical jamb reinforcing. The bond beam shall be reinforced with (2)-#4's horiz. bottom. Where a lintel is not shown on the drawings and cannot be made in accordance with these requirements, submit the opening size and location to the Architect/Engineer for determination of the lintel to be used.

8. Submit reinforcing shop drawings for all work. Provide wall elevations showing the location of openings in masonry and the location of reinforcing including lap splices. Vertical reinforcing lengths shall be coordinated with heights of CMU to be placed.

9. Complete work in accordance with ACI 530-05 and ACI 530.1-05 . Use "fine" grout having a slump of 8 to 11 inches. The minimum dimension of any grouted space measured perpendicular to reinforcing is 3"x3". Place grout in lifts not exceeding 8'-0".

10. CONTROL JOINTS: Construct in plan as shown on the architectural drawings, but not to exceed 24'-0" spacing. All horizontal joint reinforcing shall be terminated at the control joint as detailed in 3/S1-0.
